

Git Version Control System – Coding Assignment - 1

Student Details

- **Name:**
 - **Roll No:**
 - **Batch / Course:**
 - **Date of Submission:**
-

Instructions

- Perform all tasks using **Git Bash / Command Prompt**
 - **Attach screenshots** for each question as proof of execution
 - Push the final project to **GitHub**
 - Convert this document to **Word (.docx)** after completion
 - Submit **Word file**
-

Question 1

Verify that Git is correctly installed on your system and record the version displayed.

Answer:

(Write the observed Git version here)

Screenshot Evidence:

(Paste screenshot showing Git version output)

Question 2

Configure Git with your global username and email ID, and verify that the configuration has been applied successfully.

Answer:

- Configured username:
- Configured email ID:

Screenshot Evidence:

(Paste screenshot showing global Git configuration)

Question 3

Create a new local Git repository named `git-assignment` and initialize version control in it.

Answer:

(Briefly mention repository creation and initialization)

Screenshot Evidence:

(Paste screenshot showing repository initialization)

Question 4

Create a `README.md` file inside the repository, add relevant project information, and commit the file to the repository.

Answer:

- File created: `README.md`
- Commit message used:

Screenshot Evidence:

(Paste screenshot showing commit details)

Question 5

Modify the existing `README.md` file and create a new file named `index.html`. Track the changes and commit them with an appropriate commit message.

Answer:

- Modified file: `README.md`
- New file created: `index.html`
- Commit message used:

Screenshot Evidence:

(Paste screenshot showing file changes and commit)

Question 6

Display the commit history of the repository and identify the commit hash, author, and commit message.

Answer:

Commit Hash	Author	Commit Message
-------------	--------	----------------

Screenshot Evidence:

(Paste screenshot showing commit history)

Question 7

Create a new branch named `feature-branch`, switch to it, add a new file named `feature.txt`, and commit the changes.

Answer:

- Branch created: `feature-branch`
- File added: `feature.txt`
- Commit message used:

Screenshot Evidence:

(Paste screenshot showing branch creation and commit)

Question 8

Switch back to the main branch and merge the `feature-branch` into it. Ensure the merge is completed successfully.

Answer:

(Mention successful merge status)

Screenshot Evidence:

(Paste screenshot showing successful merge)

Question 9

Create a new remote repository on GitHub named `git-assignment` and push the complete local repository to GitHub.

Answer:

- GitHub repository URL:

Screenshot Evidence:

(Paste screenshot of GitHub repository with uploaded files)

Screenshot Evidence:

(Paste screenshots demonstrating undo operations)
