

MERN Internship 2026 – API Documentation

(JWT Authorization)

Overview

API structure for the MERN Internship 2026 project and specifies JWT (JSON Web Token) authorization requirements for each API endpoint.

JWT Authorization Rules (Global)

- JWT is generated after successful login.
- JWT must be sent in request headers:

```
Authorization: Bearer <token>
```

- API categories:
 - Public APIs – No JWT required
 - Admin APIs – JWT required + role = **admin**
 - Student APIs – JWT required + role = **student**

Common APIs

Endpoint	Method	JWT Required	Description	Request Object
/auth/login	POST	 No	Login user (student/admin)	body: { email, password }
/course/all-active-courses	GET	 No	Get all active courses	-

Admin APIs

JWT Required + Role Check (**admin**)

Endpoint	Method	JWT Required	Description	Request Object
----------	--------	--------------	-------------	----------------

Endpoint	Method	JWT Required	Description	Request Object
/course/all-courses	GET	☒ Yes	Get all courses (filter by date)	query: { startDate, endDate }
/course/add	POST	☒ Yes	Add a new course	body: { courseName, description, fees, startDate, endDate, videoExpireDays }
/course/update/:courseId	PUT	☒ Yes	Update course	params: { courseId }, body: { courseName, description, fees, startDate, endDate, videoExpireDays }
/course/delete/:courseId	DELETE	☒ Yes	Delete course	params: { courseId }
/video/all-videos	GET	☒ Yes	Fetch all videos	query: { courseId }
/video/add	POST	☒ Yes	Add video	body: { courseId, title, youtubeURL, description }
/video/update/:videoId	PUT	☒ Yes	Update video	params: { videoId }, body: { courseId, title, youtubeURL, description }
/video/delete/:videoId	DELETE	☒ Yes	Delete video	params: { videoId }
/admin/enrolled-students	GET	☒ Yes	Get enrolled students	query: { courseId }

Student APIs

JWT Required + Role Check (student)

Endpoint	Method	JWT Required	Description	Request Object
/student/register-to-course	POST	☒ No	Register to course	body: { courseId }
/student/change-password	PUT	☒ Yes	Change password	body: { newPassword, confirmPassword }
/student/my-courses	GET	☒ Yes	Get my courses	-
/student/my-course-with-videos	GET	☒ Yes	Get courses with videos	-

JWT Payload (Suggested)

```
{
  "userId": "string",
  "email": "string",
  "role": "admin | student"
}
```

Best Practices

- Never accept userId from frontend for secured APIs
- Extract user details from JWT in middleware
- Use role-based middleware
- Token expiry: 24 hours recommended

☒ Summary

API Type	JWT Required
Public	☒ No
Admin	☒ Yes
Student	☒ Yes
