

MySQL Installation Guide (Windows – MSI Installer)

This documentation explains how to install **MySQL Server**, **MySQL Workbench**, and related tools on **Windows OS** using the official **MySQL Installer (.msi)**. This file is ready to be used as a README.md.

1. Download MySQL Installer (.msi)

1.1 Visit the Official Download Page

Go to:

```
https://dev.mysql.com/downloads/installer/
```

1.2 Choose Installer Type

MySQL provides two installers:

Installer Type	Description
Web Installer (Recommended)	Small file, downloads components during installation
Full Installer	Large file, includes all components offline

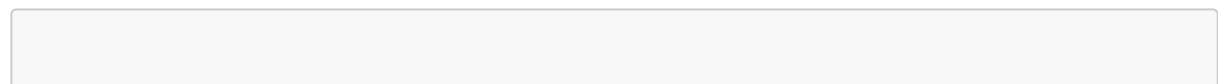

Click **Download**, then click:

```
No thanks, just start my download
```

2. Run the MySQL Installer

2.1 Launch the Installer

Double-click the **.msi** file:

```
mysql-installer-web-community-*.msi
```

2.2 Choose Setup Type

Select:

Developer Default

This installs:

- MySQL Server
- MySQL Workbench
- MySQL Shell
- MySQL Router
- Sample Databases
- Documentation

Click **Next**.

3. Check Requirements

The installer may prompt to install prerequisites:

- Visual C++ Redistributable
- .NET Framework

Click **Next** → **Execute** to install required components.

4. Install MySQL Products

A list of components appears.

Click:

Execute

Wait until each item displays **Complete**.

Click **Next**.

5. Configure MySQL Server

5.1 High Availability

Choose:

Standalone MySQL Server

Click **Next**.

5.2 Type and Networking

Use default settings:

- Config Type: **Development Machine**
- Connectivity: **TCP/IP**
- Port: **3306**
- Open Windows Firewall Port: ☒ Checked

Click **Next**.

5.3 Authentication Method

Select:

- **Use Strong Password Encryption** *(Recommended)*

Click **Next**.

5.4 Create Root Account

Set:

- Username: **root**
- Password: **your-secure-password**

Click **Next**.

5.5 Windows Service Configuration

- Run MySQL Server as a Windows Service ✓
- Start server at system startup ✓
- Service Name: **MySQL80**

Click **Next**.

5.6 Apply Configuration

Click:

Execute

Installer will:

- Initialize database
- Start MySQL Service
- Apply security settings

Look for ✓ green checkmarks.

Click **Finish**.

6. MySQL Workbench Setup

Workbench is installed automatically under Developer Default.

Click:

Next → Next → Finish

7. Verify MySQL Installation

- ✓ Using Command Prompt (CMD)

Run:

```
mysql --version
```

If a version appears, MySQL is installed correctly.

Connect to the server:

```
mysql -u root -p
```

Enter your password. If you see:

```
mysql>
```

you are connected successfully.

✓ Using MySQL Workbench

1. Open **MySQL Workbench**
2. Click **Local Instance MySQL80**
3. Enter root password

If it connects → Installation succeeded.

8. Add MySQL to PATH (If CMD Does Not Recognize mysql)

If `mysql` command gives an error:

8.1 Locate MySQL Installation Path

Common default path:

```
C:\Program Files\MySQL\MySQL Server 8.0\bin
```

8.2 Add to Environment Variables

1. Search **Environment Variables** in Windows

2. Click **Edit the system environment variables**
3. Click **Environment Variables**
4. Under **System Variables**, select **Path** → **Edit**
5. Click **New**, add:

```
C:\Program Files\MySQL\MySQL Server 8.0\bin
```

6. Click **OK** → **OK** → **OK**

Reopen CMD and test:

```
mysql --version
```

9. Create Test Database (Optional)

Run in CMD or Workbench:

```
CREATE DATABASE test_db;  
USE test_db;  
CREATE TABLE sample(id INT);
```

If no errors → MySQL is fully functional.
